EDUCATION

JIMMA UNIVERSITY 2018 – 2022

- BSc in Software Engineering
- GPA: 3.47

TECHNICAL SKILLS

Frontend Development

- Angular (Components, Services, Routing, Forms)
- TypeScript, JavaScript (ES6+)
- HTML5, CSS3, Tailwind
- Responsive & Mobile-First Design
- React (Hooks, State Management)

Backend Development

- PHP, Node.js / Express.js
- RESTful API Design
- JWT & Authentication
- PostgreSQL, MySQL

DevOps & Collaboration Tools

- GitLab (Version Control, Merge Requests, CI/CD)
- Jenkins (CI/CD Pipelines)
- Docker (Containerization, Image Management)

IT & Systems

- LAN/WAN Setup & Troubleshooting
- Computer Maintenance & IT Support
- CCTV Installation & Configuration

Tools & Other Skills

- Git & GitHub
- Project Coordination & Documentation

BIRUK MULUALEM

FULL STACK DEVELOPER

PROFILE

Full Stack Developer with 3+ years of experience building scalable web applications. Proficient in both frontend (Angular, React, TypeScript) and backend technologies (Node.js/Express, PHP), with strong database design skills in PostgreSQL and MySQL. Experienced in integrating RESTful APIs, working within CI/CD pipelines, and providing IT infrastructure support. Passionate about clean code, responsive design, and delivering end-to-end solutions.

WORK EXPERIENCE

Alet Technologies

2025 - PRESENT

Frontend Developer

- Develop and maintain high-performance, scalable Angular applications with clean, user-focused UI/UX, building reusable components, implementing complex routing, advanced form validation, and efficient state management. Integrate frontend solutions with RESTful APIs developed in ASP.NET Core and Node.js/Express, while collaborating through GitLab for version control and contributing to CI/CD pipelines using Jenkins and Docker to ensure smooth, automated deployments.

Super Double T General Trading Plc

2022 - 2025

Software Developer / IT Support

- Led development of a Logistics Management System using Angular for the frontend and ASP.NET Web API for the backend, focusing on reusable components and seamless API integration. Built Stock Management and Clinic Patient Records systems with PHP, MySQL, and modern JavaScript, while automating internal reporting processes to reduce manual data entry by approximately 30%. Designed, deployed, and maintained the company website with full mobile responsiveness and cross-browser compatibility, and provided IT infrastructure support including system maintenance, Windows Server administration, and network setup for over 50 staff.

Super Double T General Trading Plc

FREELANCE & INDEPENDENT PROJECTS

- Built a full-stack web application enabling users to track income, expenses, and savings goals, developing the frontend with React and Context API for efficient state management and interactive spending visualizations, and creating a RESTful API using Node.js/Express with PostgreSQL for secure data persistence, implementing JWT-based user authentication and deploying the solution on Netlify (frontend) and Railway (backend); additionally, developed a content management system for writers to publish and manage articles, building the frontend with Angular featuring rich text editing, category filtering, and responsive design, and designing the backend API using ASP.NET Web API with SQL Server for content storage, incorporating role-based access control (Admin, Author, Reader) and comment functionality.
